

GO IT COMPANY

Connected. Informed. In control.

Tracking. IoT. Digital infrastructure. Business solutions.

GO TODAY / IRAQI KNOW-HOW

From the field, to a clearer view.

Founded in Baghdad in 2013, GO IT Company provides tracking, Internet of Things, domain registration, hosting and technology integration services. The company brings together field equipment, digital systems and local support to help organisations monitor their assets and operations with clearer information. GO is an Aamal Group company.

2013

FOUNDED / BAGHDAD

Technology experience shaped by operational needs in Iraq.

01

Connected assets

Vehicles, generators, sensors and operational sites.

02

Digital foundations

Domains, hosting, integration and technical operation.

03

Business solutions

Systems that help teams organise their work.

04

Local support

Installation, configuration, training and follow-up within scope.

Technology for everyday operations.

ASSETS & SITES

A clear address. A presence of your own.

Registration services for Iraqi .IQ and international domains, connected to an organisation's website, email and digital services.

01 Choose & register

Review the name, availability, registration and renewal requirements.

02 Configure & connect

Configure DNS records and connect web and email services as required.

03 Manage & maintain

Organise renewals, transfers and domain details under applicable requirements.

REGISTRATION SERVICES FOR ORGANISATIONS

Each extension's requirements and name availability are checked before registration.

Digital capacity, shaped to your needs.

Hosting for websites, applications and business email, with environment setup and integration with the services your team relies on.

Illustrative cloud infrastructure visual.

01

Websites & applications

Resources and an environment suited to the system.

02

Business email

A corporate identity linked to your domain.

03

Backup & recovery

A backup and recovery policy defined in the offer.

04

Configuration & support

Technical setup and follow-up under the service plan.

GO TRACK / FLEET TRACKING

Movement in view. Management in reach.

Monitor vehicles and journeys, linking movement data to operational needs, from distribution fleets to service vehicles.

01 Location & route

Vehicle locations and movement history according to tracker and connectivity.

02 Alerts & operations

Geofences, stops and operational events according to configuration.

Editorial fleet illustration; not a specific customer project.

GO TRACK / FROM DATA TO ACTION

A journey understood. A decision informed.

Tracking becomes more useful when vehicle movement is part of an understandable journey that a team can review.

01

Capture the signal

Device readings, vehicle identity and event time.

02

Understand the journey

Review route, stops and alerts within a single context.

03

Follow through

Reports to organise movement and follow up exceptions.

INTERNET OF THINGS / CONNECTING THE FIELD

What happens on site, reaches your team.

Connect sensors and devices to a platform to read status, follow events and define the alerts operations need.

Illustrative device connectivity visual; not an installed site.

01 SENSE**02** CONNECT**03** UNDERSTAND**04** ACT**01**

Measurements with a purpose

Temperature, level, flow and operational status, according to sensors.

02

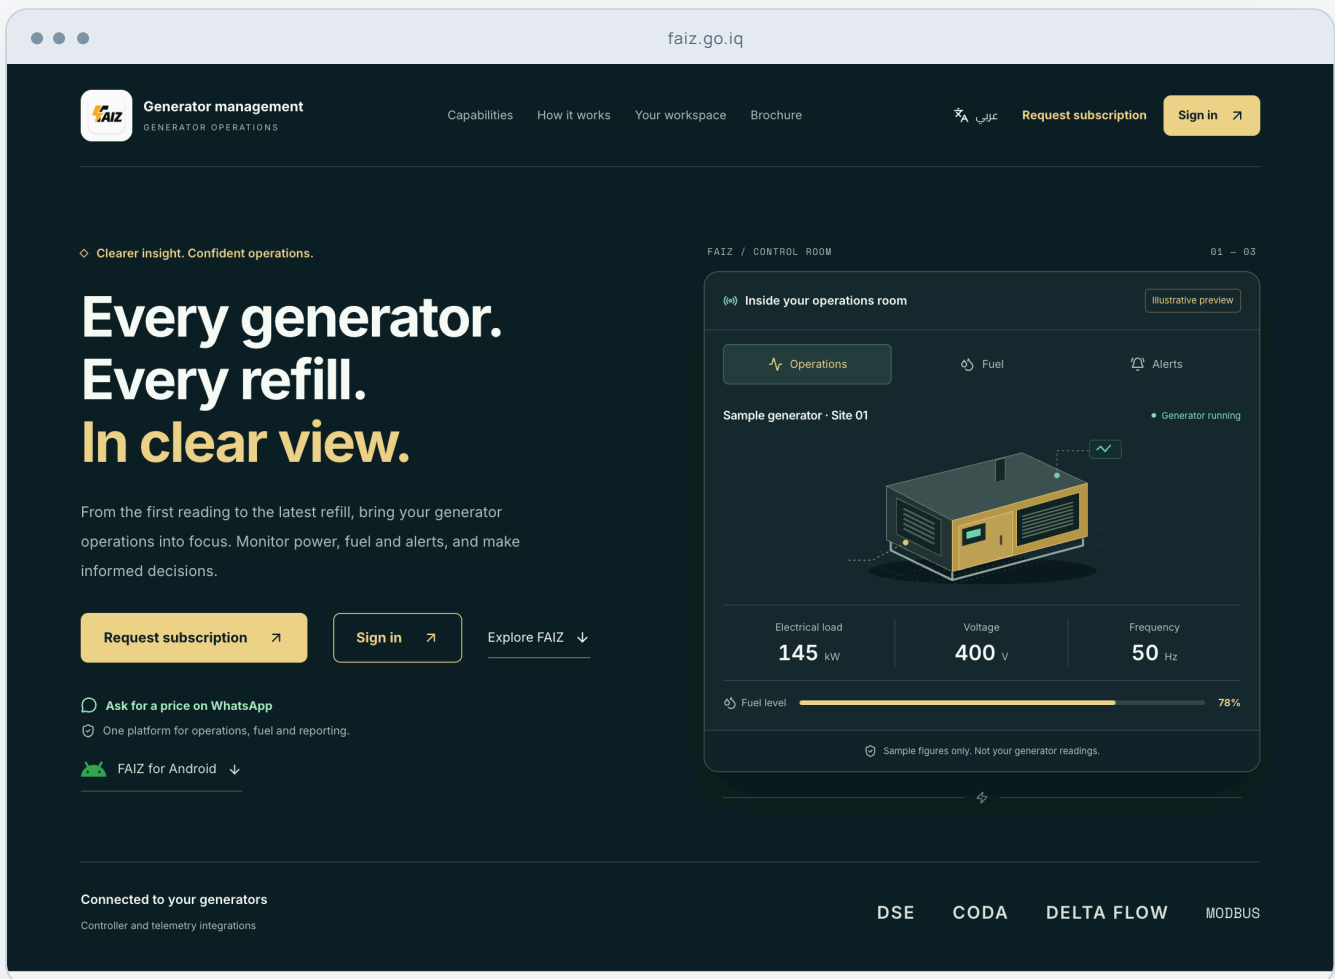

Defined integration

Devices, protocols and connectivity are defined following a site assessment.

FAIZ / POWER & FUEL

Every generator. Every refill. In clear view.

A CODA platform bringing together generator operations, power and fuel readings, and alerts. GO provides field integration and equipment connectivity within the project scope.

faiz.go.iq / Actual interface; displayed figures are illustrative.

01

Operations & fuel

Readings, refill history and generator status.

faiz.go.iq

02

Alerts & reporting

Operational events and information for team follow-up.

Closer measurement. Clearer control.

Monitoring solutions for water, pumping and treatment sites, connecting measurement and control points to site needs and available equipment.

01 Stations & pumps

Monitor levels, flow and operating status; integrate control commands where supported by scope.

02 Fountains & water systems

Configure operating cycles and timing, with lighting and pump integration according to the project.

ENGINEERING STARTS WITH A SITE REVIEW

The design defines measurement points, communication protocols and control permissions before delivery.

FIELD SOLUTIONS / COLD CHAIN & FARMING

Small signals. Greater operational value.

Use environmental and location readings in activities that need ongoing monitoring, with alerts suited to each asset and its operation.

COLD CHAIN

Temperature. Location. Status.

Connect cargo temperature, vehicle movement and door events according to available sensors, to monitor transport and storage conditions.

WATER

SMART FARMING

Measurements that guide irrigation.

Read soil moisture and monitor water flow, with irrigation schedules and pump control linked to the project design.

CAPABILITY FOLLOWS CONFIGURATION

Sensor selection, calibration, connectivity coverage and alert thresholds are essential parts of the delivery offer.

From a cargo weight, to a structured record.

Solutions connecting weighbridge data, weight tickets and reports to bring truck movement and records together.

Weighbridge image from GO company materials.

01 Reading & ticket

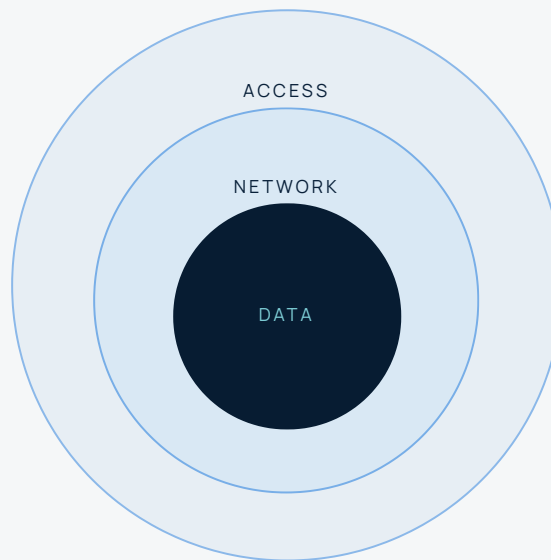

Gross, tare and net weight linked to vehicle and cargo details.

02 Archive & reports

Reviewable records, with camera or other system integration within the agreed scope.

Manageable technology. A team with a clear brief.

Configure and protect networks and systems, with installation, training and support aligned with the workplace and team needs.

Clear permissions. An organised network. Recoverable data.

01

Access protection

Accounts, permissions and access appropriate to each role.

02

Networks & connectivity

Site connectivity setup and review.

03

Operations & recovery

Technical follow-up and backups under an agreed policy.

04

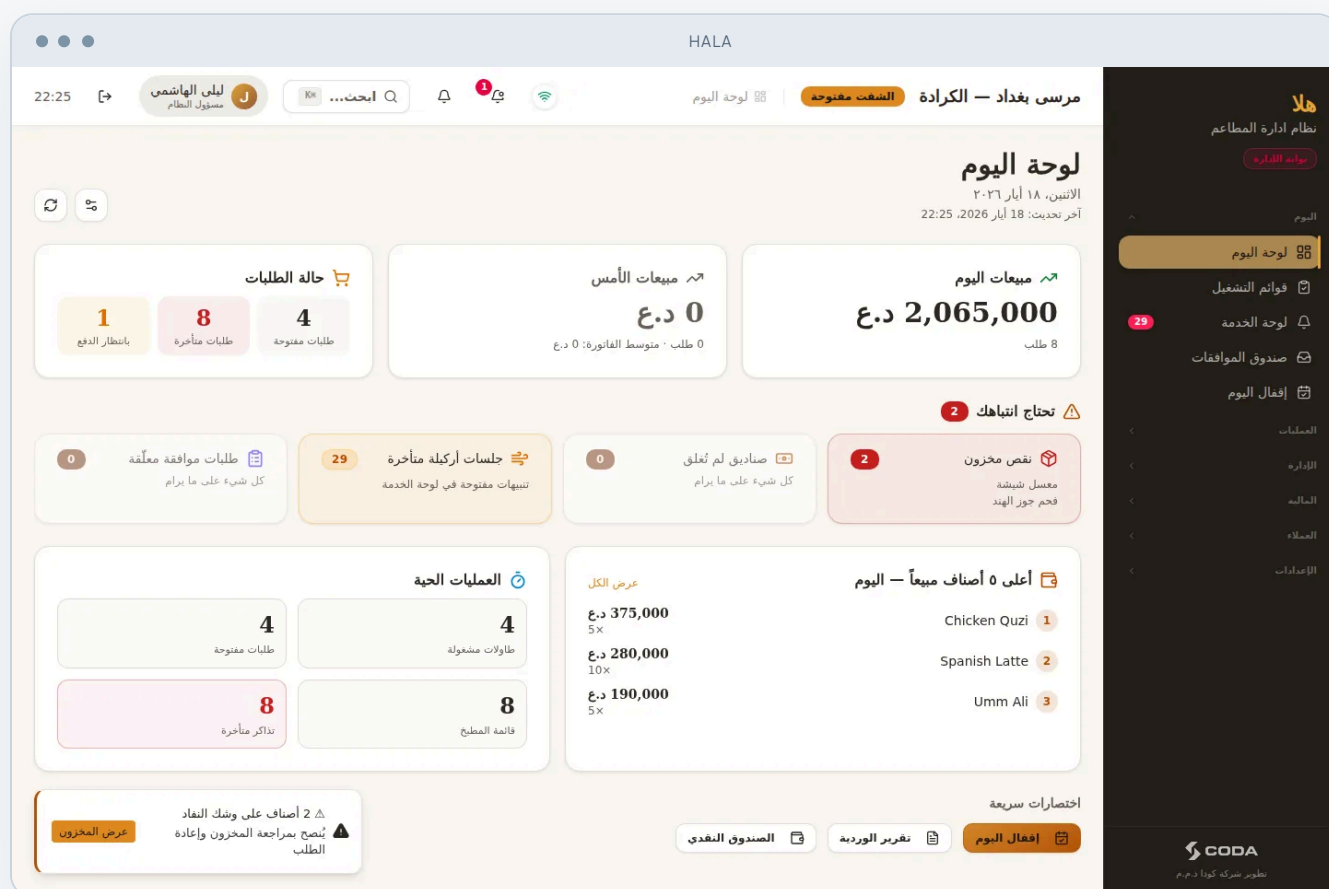

Installation & training

Setup, documentation and handover to the relevant team.

BUSINESS SOLUTIONS / WITH CODA

Systems that speak the language of operations.

Technology integration with CODA systems for business operations, from people and restaurants to buildings and construction.

HALA / CODA showcase interface; illustrative data.

01

HALA / Restaurants

Orders, kitchen, stock and branch operations.

02

CODA HRM / People

People administration, attendance and HR workflows.

03

OSOS / Building management

Service requests, maintenance, work orders and invoices.

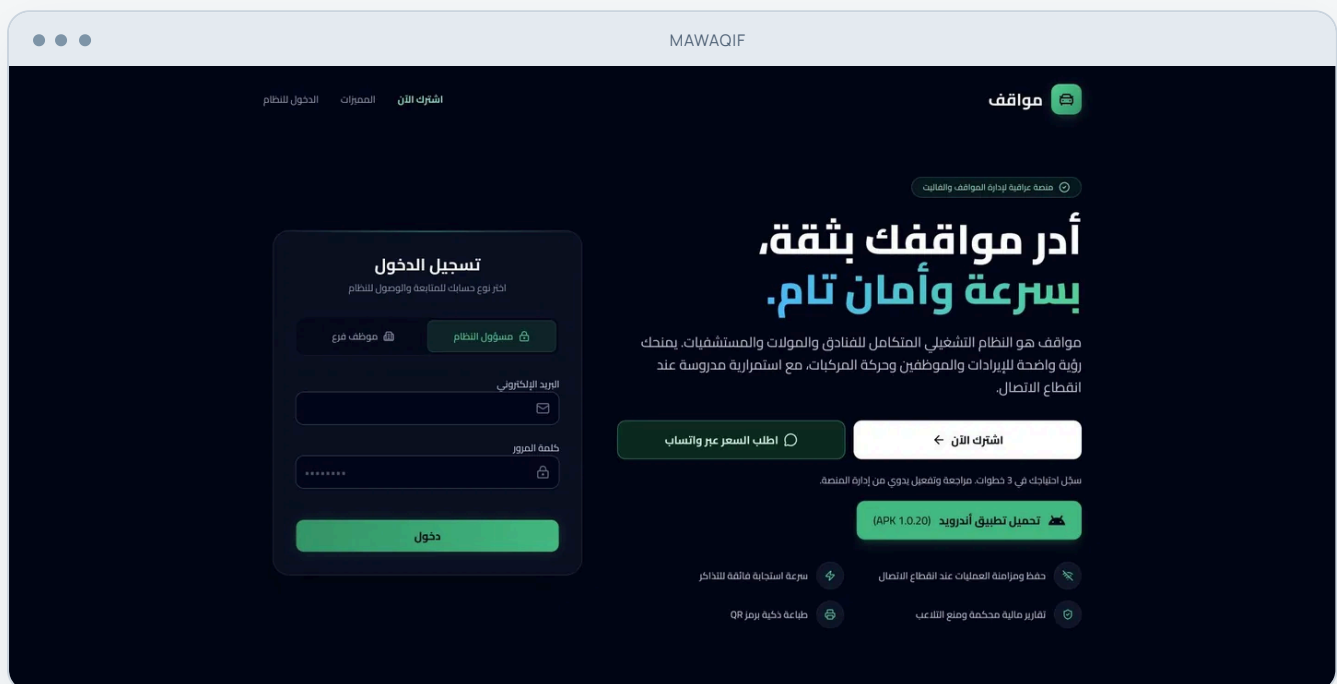

04

BUNYAN / Construction

Projects, contracts, measured work, costs and accounting.

Access and movement, within a clearer system.

Connect site requirements to digital operation systems, defining devices, roles and workflows for each project.

MAWAQIF / Actual interface from CODA showcase materials.

01 MAWAQIF

Organise vehicle movement, tickets, revenue and parking operations.

02 cAccess / Access & attendance

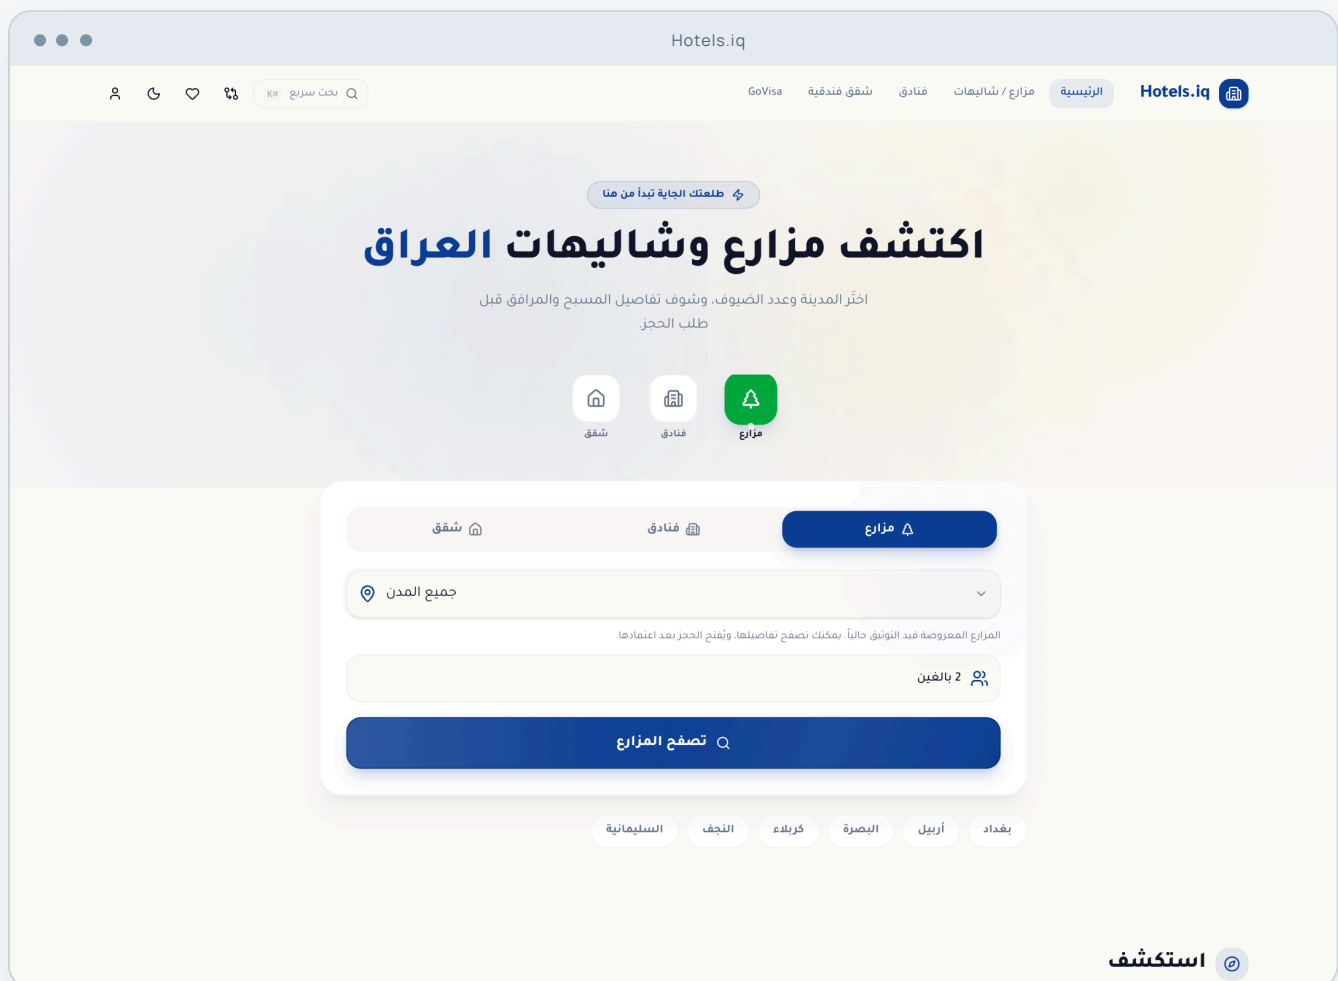

Connect access and attendance points to approved roles and equipment.

03 cFlow / Digital signage

Manage screens, content, schedules, devices and locations.

A better outing starts with a clearer choice.

Hotels.iq presents accommodation and hospitality options in Iraq, including farms, chalets, hotels and serviced apartments.

Hotels.iq / Current Arabic website interface.

01

Discover properties

City, guests, amenities and details to support comparison.

hotels.iq

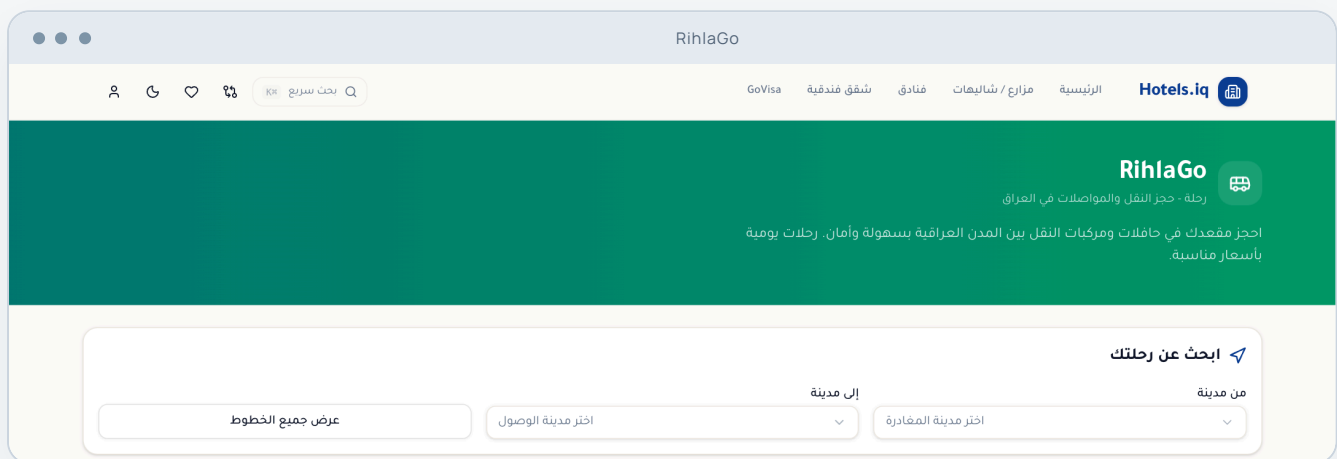

02

Presentation & approval

Farm bookings open after property approval. Current listings are being verified.

Between cities, a clearer journey.

RihlaGo is a digital interface for exploring intercity routes and searching for journeys and seats within Hotels.iq.

RihlaGo / Current Arabic search interface.

01

Choose a destination

Departure and arrival cities.

02

Explore options

The route, journey and available seat.

03

Verify before confirmation

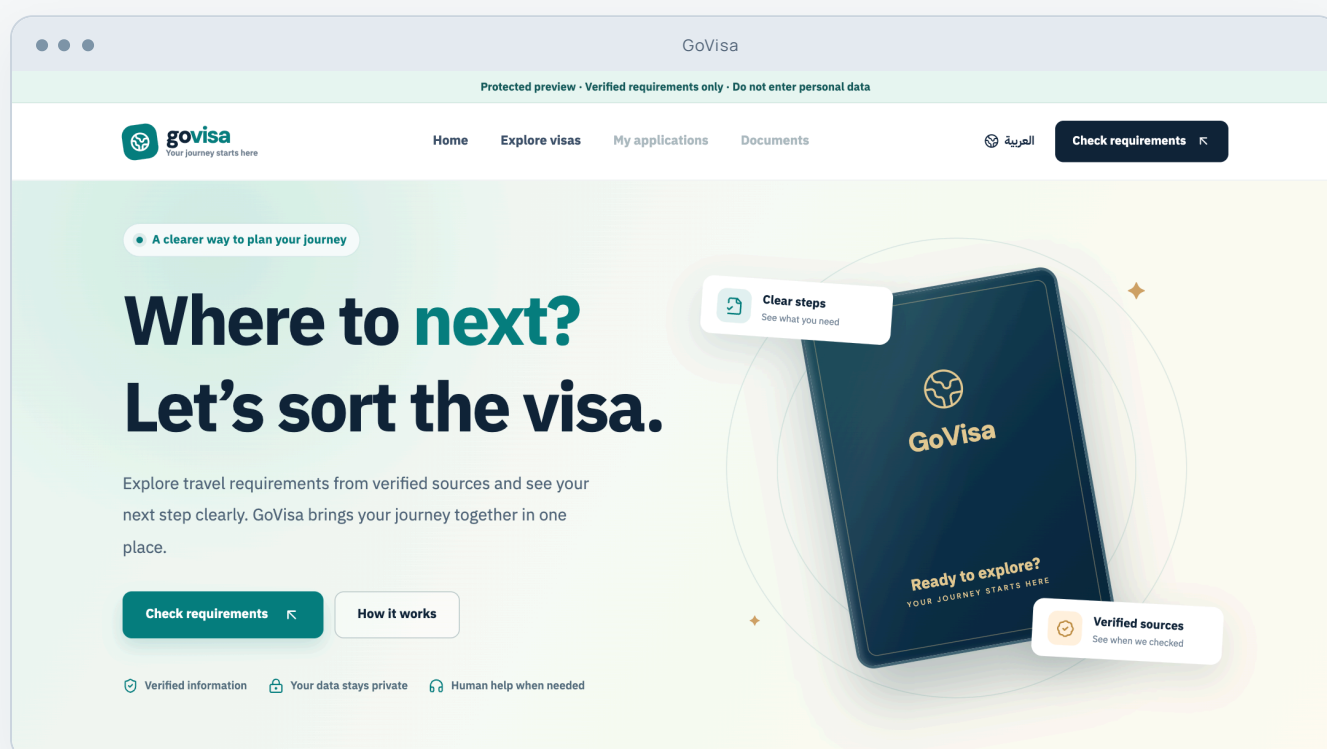

Journey details, availability and operator are confirmed for each request.

hotels.iq/rihlago

GROUP ECOSYSTEM / GOVISA

The first travel step, with sourced information.

GoVisa / Under development. A project for organising travel-requirement research, sources and staff workflows.

GoVisa / Current public preview interface.

01

Requirements & sources

Present sourced requirements and available verification dates.

02

Staff workflows

Service catalogue, tasks and tickets within the review environment.

PROJECT STATUS

Preview stage; customer intake, payments and documents are not currently a complete available service.

visa.go.iq

DELIVERY APPROACH / FROM NEED TO OPERATION

A clear scope. Delivery you can follow.

Each project starts with understanding the operation and site, then defining the solution, equipment, acceptance criteria and responsibilities.

01

Discover & assess

Objectives, assets, measurement points and available connectivity.

02

Design & propose

Components, integration, schedule, cost and support terms.

03

Configure & test

Installation, integration and testing of agreed functions.

04

Hand over & support

Training, documentation, follow-up and clear responsibilities.
